Dictionary of Scientific and Technical Terminology - 2013-11-11

Scientific and technical contacts between nations have necessitated the publication of various language textbooks, manuals and reference books. Particularly important among them are multilingual scientific and technical dictionaries. This English-German-French-Dutch-Russian Dictionary of Scientific and Technical Terms contains some 9000 entries. The main feature of the Dictionary is that it includes first and foremost general scientific terms needed by an engineer working in any branch of science and technology. Besides, the Dictionary includes the basic terms used in physics, mathematics, the fundamentals of electrical engineering and chemistry, and also the most essential terms pertaining to manufacturing processes, machine design, testing methods, etc. The Compilers were confronted with a difficult task, as nowadays science and technology are developing rapidly and the minimum scientific and technical vocabulary required by a

specialist is increasing accordingly. The Compilers have taken special pains to include the entire basic modern technical vocabulary, omitting superfluous words and phrases. They have tried to solve this problem by selecting mainly those scientific and technical terms which constitute the basis of a specialised vocabulary. Therefore, the Dictionary includes the vocabulary pertaining to general study courses in mathematics, physics and chemistry, and also in electrical engineering, electronics and machine design, given in technical colleges irrespective of their specification. This lends the Dictionary an «all-purpose» character, making it equally useful to scientists and engineers of different countries, who have graduated from colleges with different curricula.

Academic Vocabulary in Learner Writing - Magali Paquot 2014-10-01

Academic vocabulary is in fashion, as witnessed by the

increasing number of books published on the topic. In the first part of this book, Magali Paquot scrutinizes the concept of 'academic vocabulary' and proposes a corpus-driven procedure based on the criteria of keyness, range and evenness of distribution to select academic words that could be part of a common-core academic vocabulary syllabus. In the second part, the author offers a thorough analysis of academic vocabulary in the International Corpus of Learner English (ICLE) and describes the factors that account for learners' difficulties in academic writing. She then focuses on the role of corpora, and more particularly, learner corpora, in EAP material design. It is the first monograph in which Granger's (1996) Contrastive Interlanguage Analysis is used to compare 10 ICLE learner sub-corpora, in order to distinguish between linguistic features that are shared by learners from a wide range of mother tongue backgrounds and unique features that may

be transfer-related.

Engineering and Philosophy - Zachary Pirtle 2021-05-14
Engineers love to build “things” and have an innate sense of wanting to help society. However, these desires are often not connected or developed through reflections on the complexities of philosophy, biology, economics, politics, environment, and culture. To guide future efforts and to best bring about human flourishing and a just world, Engineering and Philosophy: Reimagining Technology and Progress brings together practitioners and scholars to inspire deeper conversations on the nature and varieties of engineering. The perspectives in this book are an act of reimagination: how does engineering serve society, and in a vital sense, how should it.
Web Engineering - David Lowe 2011-04-06

Over the last few years Web Engineering has begun to gain mainstream acceptance within the software engineering, IT and related disciplines. In particular, both researchers and practitioners are increasingly recognizing the unique characteristics of Web systems, and what these characteristics simply in terms of the approaches we take to Web systems development and deployment in practice. A scan of the publications in related conference proceedings and journals highlights the diversity of the discipline areas which contribute to both the richness and the complexity of Web Engineering. The 5th International Conference on Web Engineering (ICWE2005), held in Sydney, Australia, extends the traditions established by the earlier conferences in the series: ICWE2004 in Munich, Germany; ICWE2003 in Oviedo, Spain; ICWE2002 in Santa Fe, Argentina; and ICWE2001 in Caceres, Spain. Not only have these conferences helped

disseminate cutting edge research within the field of Web Engineering, but they have also helped define and shape the discipline itself. The program we have put together for ICWE2005 continues its evolution. Indeed, we can now begin to see the maturing of the field. For possibly the first time, there was very little debate within the Program Committee about which papers were in and out of scope, and much more debate as to the each papers contributions to the field.

concepts and emotions. Of why and wherefore. Of bafflement and wonderment. what happens in a man's innermost... is a soliloquy. Not of a troubled soul but of a soulful soul. Thinking out loud. what happens in a man's innermost... is, i'm sure, not unique to this human being. whoever this 'human being' may be! i know not where from. i only know they come. Unmasked, uncalled, unbidden. flooding, forming, blending. Thoughts falling and rising, flowing and ebbing, rolling, and etching into meaty mixes. Now turbulently gushing forth, now curiously peeping and peeling, now stunningly fretting and fuming, now gently curling over. With a clarity that surprises, with a purpose that questions, with a craze that defines, with an anger that belies belief. Thoughts that frantically search, that maddeningly beckon, that beggingly plead, that pleasure and pain, that bristle and bleed. Finally, all this tumult (hue!) and cry is just storm in a teacup. All this bouncing and battering is just

storm before calm. As though nothing ever was that ever was, nothing ever is that ever is, nothing ever will be that ever will be. Mutually defining the 'me' in me.
