*Moon-face and Other Stories* - Jack London 1906

JACK LONDON (1876-1916), American novelist, born in San Francisco, the son of an itinerant astrologer and a spiritualist mother. He grew up in poverty, scratching a living in various legal and illegal ways - robbing the oyster beds, working in a canning factory and a jute mill, serving aged 17 as a common sailor, and taking part in the Klondike gold rush of 1897. This various experience provided the material for his works, and made him a socialist. "The son of the Wolf" (1900), the first of his collections of tales, is based upon life in the Far North, as is the book that brought him recognition, "The Call of the Wild" (1903), which tells the story of the dog Buck, who, after his master's death, is lured back to the primitive world to lead a wolf pack. Many other tales of struggle, travel, and adventure followed, including "The Sea-Wolf" (1904), "White Fang" (1906), "South Sea Tales" (1911), and "Jerry of the South Seas" (1917). One of London's most interesting novels is the semi-autobiographical "Martin Eden" (1909). He also wrote socialist treatises, autobiographical essays, and a good deal of journalism.

*High Integrity Software* - John Gilbert Presslie Barnes 2003

This book provides an accessible introduction to the SPARK programming language. Updated 'classic' that covers all of the new features of SPARK, including Object Oriented Programming. The only book on the market that covers this important and robust programming language. CD-ROM contains the main SPARK tools and additional manuals giving all the information needed to use SPARK in practice. Technology: The SPARK language is aimed at writing reliable software that combines simplicity and rigour within a practical framework. Because of this, many safety-critical, high integrity systems are developed using SPARK. User

Level: Intermediate Audience: Software engineers, programmers, technical leaders, software managers.

Engineering companies in fields such as avionics, railroads, medical instrumentation and automobiles. Academics giving MSc courses in Safety Critical Systems Engineering, System Safety Engineering, Software Engineering. Author Biography: John Barnes is a veteran of the computing industry. In 1977 he designed and implemented the RTL/2 programming language and was an original member of the ADA programming language design team. He was founder and MD of Alsys Ltd from 1985 to 1991. Currently self employed, John is the author of 'Programming in ADA' which has sold 150000 copies and been translated into 6 languages.

*Global Economic Prospects and the Developing Countries* - 2002

This edition of the annual publication considers the need to reshape the global architecture of world trade, in order to help strengthen the economies of developing countries and reduce world poverty. The report focuses on four policy areas: the establishment of a development round of WTO negotiations to reduce trade barriers; global co-operation to expand trade outside the WTO; the adoption of pro-trade development policies by high-income countries; and enacting trade reforms in developing countries. The findings of the report suggest that developing countries could significantly increase their incomes, if all countries progressively implement the proposed trade reforms. This would result in a world with a much higher standard of living, an estimated 300 million people lifted out of poverty by 2015, and a significant increase in the number of children living beyond their fifth birthday throughout the developing world.

Whether Hicok is considering the reflection of human faces in the Vietnam War Memorial or the elements of a Modern Prototype factory, he prompts an icy realization that we may have never seen the world as it truly is. But his resilient voice and consistent perspective is neither blaming nor didactic, and ultimately enlightening. From the shadowed corners into which we dare not look clearly, Hicok makes us witness and hero of The Legend of Light. "

*How to Pass OSCP Series: Windows Privilege Escalation Step-By-Step Guide* - Alan Wang 2020-11-13

This book is the first of a series of How To Pass OSCP books and focus on techniques used in Windows Privilege Escalation. This is a step-by-step guide that walks you through the whole process of how to escalate privilege in Windows environment using many common techniques. We start by gathering as much information about the target as possible either manually or using automated scripts. Next, we search for misconfigured services or scheduled tasks, insufficient file permission on binaries or services, vulnerable kernel, vulnerable software running with high privileges, sensitive information stored on local files, credential saved in the memory, registry settings that always elevate privileges before executing a binary, hard-coded credential contained in the application configuration files, and many more. Table of Contents Introduction Section One: Windows Configuration Chapter 1: AlwaysInstallElevated Section Two: Domain Controller Chapter 2: Zerologon Section Three: Windows Service Chapter 3: Service - Insecure File Permission Chapter 4: Service - Unquoted Path Chapter 5: Service - Bin Path Chapter 6: Service - Registry Chapter 7: Service - DLL Hijacking Section Four: Scheduled Tasks Chapter 8: Scheduled Tasks Section Five: Windows Registry Chapter 9: Autorun Chapter 10: Startup Applications Section Six: Windows Kernel Chapter 11: Kernel - EternalBlue Chapter 12: Kernel - MS15-051 Chapter 13: Kernel - MS14-058 Section Seven: Potato Exploits Chapter 14: Juicy Potato Chapter 15: Rogue Potato Section Eight: Password Mining Chapter 16: Password Mining - Memory Chapter 17: Password Mining - Registry Chapter 18: Password Mining - SiteList Chapter 19: Password Mining - Unattended Chapter 20: Password Mining - Web.config Section Nine: UAC Bypass Chapter 21: User Account Control Bypass For more information, please visit <http://www.howtopassoscp.com/>.

The Protection and Conservation of Water Resources - Hadrian F. Cook 2017-06-26

This book is about water - in Britain, and in the world. It is about water resources, their conservation, protection of water quality for human consumption and aquatic ecosystems. Since the publication of the first edition in 1998, major political and regulatory changes have taken place; this book provides a clear and comprehensive update of conservation and water resource management issues in the UK over the past two decades, and - in an expansion of its original UK perspective - now includes examples of global best practice. The UK's 2003 adoption of the EU Water Framework Directive has had enormous implications for the conservation and management of our water resources. In 2016, with the UK's decision to leave the EU, the governance scene is entering upon an unpredictable future regarding its major water resource policies. The Protection and Conservation of Water Resources, Second edition provides a clear and comprehensive update of conservation and water resource management issues. Chapter 1 deals with sustainability and water policy, outlines the issues and challenges, and asks: what is integrated water management? Chapter 2 reviews water availability and sufficiency in Britain, while Chapter 3 explores the dynamic between institutions and legislative framework. Chapter 4 introduces the catchment approach, and chapters 5 and 6 explore the issues of sustaining bulk supply and the imperatives of climate change. Chapter 7 looks at the contemporary background to water quality issues, and Chapter 8 provides case studies of catchment problems, both urban and rural. Chapter 9 describes solutions in land use change, including technical fixes and their sustainability. Chapter 10 is concerned with emerging governance arrangements, and Chapter 11 takes a global view, looking at successful examples around the world to find positive lessons from Europe, north America and Australia.

**Ambient Communications and Computer Systems** - Gregorio Martinez Perez 2018-03-20

This book includes high-quality, peer-reviewed papers from the International Conference on Recent Advancement in Computer, Communication and Computational Sciences (RACCCS-2017), held at Aryabhata College of Engineering & Research Center, Ajmer, India on September 2-3, 2017, presenting the latest developments and technical solutions in computational sciences. Data science, data- and knowledge engineering require networking and communication as a backbone and have a wide scope of implementation in engineering sciences. Keeping this ideology in mind, the book offers insights that reflect the advances in these fields from upcoming researchers and leading academicians across the globe. Covering a variety of topics, such as intelligent hardware and software design, advanced communications, intelligent computing technologies, advanced software engineering, the web and informatics, and intelligent image processing, it helps those in the computer industry and academia use the advances of next-generation communication and computational technology to shape real-world applications.
