[How to Think Bigger](#) - Martin Meadows 2015-07-04

How to Get More Motivated, Set Bigger Goals, and Achieve More by Thinking Bigger Have you ever wondered what separates people who think bigger from people who set their bar low? What makes one person accept low standards and another person to constantly raise them? Why does one person strive to build an international organization affecting the lives of millions of people, while another person is content working her entire life as a clerk? (Not that there's anything wrong with being a clerk!) Why is one person challenging herself to run marathons, train her body and get fitter, while another is happy living a sedentary, unhealthy lifestyle? What drives a person who's optimizing every single aspect of her life and what causes another person to maintain the status quo? You can say, "Well, the answer is simple enough - one person is ambitious, while the other one is not." But what exactly causes it? And most importantly - how do you become more ambitious and think bigger? Is it something you're born with and can't change, or is it something over which you have control? I found this topic so fascinating I decided to find out the answer for myself and write a book about it. This book is the result of my research about people who think big and the science of being more ambitious. Here are just some of the things you will learn from the book: - What key things you need to inspire yourself to think

bigger, and more importantly, achieve your big goals. - Why you need a "why," and what kind of motivators will set you up for success (hint: attaining money or status are some of the least motivating goals possible). - The single most important thing to thinking bigger. If you don't have it in your life, you will sabotage your efforts - guaranteed. - What the chimp is and why you need to learn how to control it to get yourself motivated and work on your big goals. You can be making things hard for yourself without being aware of it. - How to cultivate the art of strategic laziness to achieve more while doing much less than other people (why work so hard if you can get better results by being lazy?). - The seven most important triggers of flow - a state of perfect focus where the magic happens. - The secret of achieving the impossible is not really such a secret, but most people tend to forget about it and get overwhelmed by their goals. I wrote this book to increase my motivation, teach myself how to think bigger and learn how to raise my standards. I hope the answer I found will help you as much as it has helped me. You can also learn how to find motivation to become the best version of you. Scroll up and buy the book now. Chemical and Bioprocess Engineering - Ricardo Simpson 2013-12-04

The goal of this textbook is to provide first-year engineering students with a firm grounding in the fundamentals of chemical and bioprocess engineering. However, instead of being a general overview of the two topics, Fundamentals of Chemical and Bioprocess Engineering will identify and focus on specific areas in which attaining a solid competency is desired. This strategy is the direct result of studies showing that broad-based courses at the freshman level often leave students grappling with a lot of material, which results in a low rate of retention.

Specifically, strong emphasis will be placed on the topic of material balances, with the intent that students exiting a course based upon this textbook will be significantly higher on Bloom's Taxonomy (knowledge, comprehension, application, analysis and synthesis, evaluation, creation) relating to material balances. In addition, this book also provides students with a highly developed ability to analyze problems from the material balances perspective, which leaves them with important skills for the future. The textbook consists of numerous exercises and their solutions. Problems are classified by their level of difficulty. Each chapter has references and selected web pages to vividly illustrate each example. In addition, to engage students and increase their comprehension and rate of retention, many examples involve real-world situations.
