Starting a New Church - Ralph Moore 2002-09-06

According to the author perhaps our greatest responsibility is to evangelize our own generation. Yet established churches are not able to do that. In fact, rising generations of Americans live in ignorance of Jesus Christ and have no moral absolutes. Aggressive church planting, the author believes, is the answer to the problem, because new churches focus on the needs of each new generation and present biblical truth in the cultural context that best reaches those people. The objectives of this book are to lay down the challenge to consider becoming a church planter while at the same time screen out wishful thinking and focus on the practical challenges of church planting. This authoritative and edgy message is the next thing in evangelism.

Nature, Empire, and Nation - Jorge Cañizares-Esguerra 2006

This collection of essays explores two traditions of interpreting and manipulating nature in the early-modern and nineteenth-century Iberian world: one instrumental and imperial, the other patriotic and national. Imperial representations laid the ground for the epistemological transformations of the so-called Scientific Revolutions. The patriotic narratives lie at the core of the first modern representations of the racialized body, Humboldtian theories of

biodistribution, and views of the landscape as a historical text representing different layers of historical memory.

Electrical Energy Efficiency - Andreas Sumper
2012-03-15

The improvement of electrical energy efficiency is fast becoming one of the most essential areas of sustainability development, backed by political initiatives to control and reduce energy demand. Now a major topic in industry and the electrical engineering research community, engineers have started to focus on analysis, diagnosis and possible solutions. Owing to the complexity and cross-disciplinary nature of electrical energy efficiency issues, the optimal solution is often multi-faceted with a critical solutions evaluation component to ensure cost effectiveness. This single-source reference brings a practical focus to the subject of electrical energy efficiency, providing detailed theory and practical applications to enable engineers to find solutions for electroefficiency problems. It presents power supplier as well as electricity user perspectives and promotes routine implementation of good engineering practice. Key features include: a comprehensive overview of the different technologies involved in electroefficiency, outlining monitoring and control concepts and practical design techniques used in industrial applications; description of the current standards of electrical motors, with

illustrative case studies showing how to achieve better design; up-to-date information on standardization, technologies, economic realities and energy efficiency indicators (the main types and international results); coverage on the quality and efficiency of distribution systems (the impact on distribution systems and loads, and the calculation of power losses in distribution lines and in power transformers). With invaluable practical advice, this book is suited to practicing electrical engineers, design engineers, installation designers, M&E designers, and economic engineers. It equips maintenance and energy managers, planners, and infrastructure managers with the necessary knowledge to properly evaluate the wealth of electrical energy efficiency solutions for large investments. This reference also provides interesting reading material for energy researchers, policy makers, consultants, postgraduate engineering students and final year undergraduate engineering students.

Landscapes of Power and Identity - Cynthia Radding
2005-12-28

Landscapes of Power and Identity is a groundbreaking comparative history of two colonies on the frontiers of the Spanish empire—the Sonora region of northwestern Mexico and the Chiquitos region of eastern Bolivia's lowlands—from the late colonial period through the middle of the nineteenth century. An innovative combination of environmental and cultural history, this book reflects Cynthia Radding's more than two decades of research on Mexico and Bolivia and her consideration of the relationships between human societies and the geographic landscapes they inhabit and create. At first glance, Sonora and Chiquitos are quite different: one a scrub-covered desert, the other a tropical rainforest of the greater Amazonian and Paraguayan river basins. Yet the regions are

similar in many ways. Both were located far from the centers of colonial authority, organized into Jesuit missions and linked to the principal mining centers of New Spain and the Andes, and then absorbed into nation-states in the nineteenth century. In each area, the indigenous communities encountered European governors, missionaries, slave hunters, merchants, miners, and ranchers. Radding's comparative approach illuminates what happened when similar institutions of imperial governance, commerce, and religion were planted in different physical and cultural environments. She draws on archival documents, published reports by missionaries and travelers, and previous histories as well as ecological studies and ethnographies. She also considers cultural artifacts, including archaeological remains, architecture, liturgical music, and religious dances. Radding demonstrates how colonial encounters were conditioned by both the local landscape and cultural expectations; how the colonizers and colonized understood notions of territory and property; how religion formed the cultural practices and historical memories of the Sonoran and Chiquitano peoples; and how the conflict between the indigenous communities and the surrounding creole societies developed in new directions well into the nineteenth century.

Tropical Zion - Allen Wells 2008-12-22

Seven hundred and fifty Jewish refugees fled Nazi Germany and founded the agricultural settlement of Sosúa in the Dominican Republic, then ruled by one of Latin America's most repressive dictators, General Rafael Trujillo. In

Tropical Zion, Allen Wells, a distinguished historian and the son of a Sosúa settler, tells the compelling story of General Trujillo, Franklin Delano Roosevelt, and those fortunate pioneers who founded a successful employee-owned dairy cooperative on the north shore of the island. Why did a dictator admit these desperate refugees when so few nations would accept those fleeing fascism? Eager to mollify international critics after his army had massacred 15,000 unarmed Haitians, Trujillo sent representatives to Évian, France, in July, 1938 for a conference on refugees from Nazism. Proposed by FDR to deflect criticism from his administration's restrictive immigration policies, the Évian Conference proved an abject failure. The Dominican Republic was the only nation that agreed to open its doors. Obsessed with stemming the tide of Haitian migration across his nation's border, the opportunistic Trujillo sought to "whiten" the Dominican populace, welcoming Jewish refugees who were themselves subject to racist scorn in Europe. The Roosevelt administration sanctioned the Sosúa colony. Since the United States did not accept Jewish refugees in significant numbers, it encouraged Latin America to do so. That prodding, paired with FDR's overriding preoccupation with fighting fascism, strengthened U.S. relations with Latin American dictatorships for decades to come. Meanwhile, as Jewish organizations worked to get Jews out of Europe, discussions about the fate of worldwide Jewry exposed fault lines between Zionists and Non-Zionists. Throughout his discussion of these broad dynamics, Wells weaves vivid narratives about the founding of Sosúa, the original settlers and their families, and the life of the unconventional beach-front colony.

Holocene Extinctions - Samuel T. Turvey
2009-05-28

The extent to which human activity has influenced species extinctions during the recent

prehistoric past remains controversial due to other factors such as climatic fluctuations and a general lack of data. However, the Holocene (the geological interval spanning the last 11,500 years from the end of the last glaciation) has witnessed massive levels of extinctions that have continued into the modern historical era, but in a context of only relatively minor climatic fluctuations. This makes a detailed consideration of these extinctions a useful system for investigating the impacts of human activity over time. Holocene Extinctions describes and analyses the range of global extinction events which have occurred during this key time period, as well as their relationship to both earlier and ongoing species losses. By integrating information from fields as diverse as zoology, ecology, palaeontology, archaeology and geography, and by incorporating data from a broad range of taxonomic groups and ecosystems, this novel text provides a fascinating insight into human impacts on global extinction rates, both past and present. This truly interdisciplinary book is suitable for both graduate students and researchers in these varied fields. It will also be of value and use to policy-makers and conservation professionals since it provides valuable guidance on how to apply lessons from the past to prevent future biodiversity loss and inform modern conservation planning.
