Medusa's Ankles - A. S. Byatt 2021-11-23

A ravishing, luminous selection of short stories from the prize-winning imagination of A. S. Byatt, "a storyteller who could keep a sultan on the edge of his throne for a thousand and one nights" (The New York Times Book Review). With an introduction by David Mitchell, best-selling author of *Cloud Atlas* *Mirrors* shatter at the hairdresser's when a middle-aged client explodes in rage. Snow dusts the warm body of a princess, honing it into something sharp and frosted. Summer sunshine flickers on the face of a smiling child who may or may not be real. *Medusa's Ankles* celebrates the very best of A. S. Byatt's short fiction, carefully selected from a lifetime of writing. Peopled by artists, poets, and fabulous creatures, the stories blaze with creativity and color. From ancient myth to a British candy factory, from a Chinese restaurant to a Mediterranean swimming pool, from a Turkish bazaar to a fairy-tale palace, Byatt transports her readers beyond the veneer of the ordinary—even beyond the gloss of the fantastical—to places rich and strange and wholly unforgettable.

Signposts - Policy and practice for teaching about religions and non-religious world views in intercultural education - Robert Jackson 2014-08-01

How can the study of religions and non-religious world views contribute to intercultural education in schools in Europe? An important recommendation from the Committee of Ministers of the Council of Europe (Recommendation CM/Rec(2008)12 on the dimension of religions and non-religious convictions within intercultural education) aimed to explain the nature and objectives of this form of education. *Signposts* goes much further by providing advice to policy makers, schools (including teachers, senior managers and governors) and teacher trainers on tackling issues arising from the recommendation. Taking careful account of feedback from education officials, teachers and teacher trainers in Council of Europe member states, *Signposts* gives advice, for example, on clarifying the terms used in this form of education; developing competences for teaching and learning, and working with different didactical approaches; creating "safe space" for

moderated student-to-student dialogue in the classroom; helping students to analyse media representations of religions; discussing non-religious world views alongside religious perspectives; handling human rights issues relating to religion and belief; and linking schools (including schools of different types) to one another and to wider communities and organisations. *Signposts* is not a curriculum or a policy statement. It aims to give policy makers, schools and teacher trainers in the Council of Europe member states, as well as others who wish to use it, the tools to work through the issues arising from interpretation of the recommendation to meet the needs of individual countries. *Signposts* results from the work of an international panel of experts convened jointly by the Council of Europe and the European Wergeland Centre, and is written on the group's behalf by Professor Robert Jackson.

Microsurgical Endodontics - Arnaldo Castellucci 2019

Igienista Orale - Viviana Cortesi Ardizzone 2013-10-10T00:00:00+02:00
Igienista Orale - teoria e pratica professionale è stato scritto pensando a questo doppio ruolo e, soprattutto, ad una professione in continua evoluzione. Il libro si fonda sui principi del "sapere", del "saper fare" e del "far sapere". Sapere: è fondamentale che l'igienista abbia una conoscenza approfondita dell'anatomia e della fisiologia del cavo orale per poterne gestire l'igiene nella maniera più appropriata. È importante che impari a riconoscere i segni clinici per capire se sono "sentinelle" prodromiche di malattie sistemiche. Inoltre, l'igienista orale deve sapere gestire nella maniera più appropriata l'igiene orale sia del paziente sano sia del paziente affetto da malattie sistemiche importanti (diabete, cardiopatie, trapianti, problemi oncologici ecc.). Saper fare: il volume presenta innumerevoli trattamenti personalizzati di casi semplici e complessi, resi possibili anche dal supporto della più avanzata

strumentazione. Gli autori fanno uso di numerose tabelle e immagini per dare un supporto didattico-pratico. Far sapere: conoscenze di comunicazione e marketing devono far parte del bagaglio delle competenze di un igienista orale al passo con i tempi. Non è più sufficiente saper lavorare "bene", è fondamentale possedere abilità comunicazionali ed enfatizzare la propria professionalità in un mercato sempre più competitivo. Il volume, così realizzato, è un insostituibile manuale per lo studente e uno strumento di rapida consultazione per il professionista. Nella sezione dedicata al volume di www.mediquiz.it, l'utente potrà verificare le proprie conoscenze utilizzando i test di autovalutazione.

What is the material of the artifact? What are the characteristics of the substrates? Is it possible to adequately isolate the tooth? It is fundamental to answer these questions when performing the assessment

before beginning the final and decisive phase of prosthetic restoration: cementation. The materials and techniques used for cementation are described in this text, which is specifically dedicated to prosthetists and to those who practice conservative dentistry. Cementation is a complex procedure that requires good skills, and its outcome depends on the knowledge of the substrates involved and the choice of the most suitable cement for the specific situation. [Digital Skills and Life-long Learning: Digital Learning as a New Insight of Enhanced Learning by the Innovative Approach Joining Technology and Cognition](#) - Dina Di Giacomo 2019-03-01

Recently, technology and aging have been key research areas in human cognition. The Research Topic "Digital Skills and Life-long Learning: Digital Learning as a New Insight of Enhanced Learning by the Innovative Approach Joining Technology and Cognition" investigated technology's impact on cognitive and intellectual processes, highlighting how intensively technology can change and/or enhance the cognitive functioning throughout one's lifespan. The aim of this Research Topic was to provide an outlook through multidisciplinary research and development while addressing the dynamic intersection of cognition, mind, and technology. Our scope was 1) to favor the cognitive technology debate, 2) to overcome the dichotomies of technology and psychology, 3) to emphasize the advances in knowledge and well-being. This Research Topic comprises review studies and original articles, focused on digital skills that enhance human potential. Transversal approaches and cross-sectorial analysis were encouraged, leading to investigation areas related to cognitive and mental processing—in educational, rehabilitation, clinical settings—across aging. Articles of high relevance to the Research Topic were submitted on the subjects of a) research in human performance and human factors, b) new research and technologies addressing the needs of a growing populace, and c) cognitive aging and cognitive rehabilitation research.

Infection Control in the Intensive Care Unit - Hendrick K.F. van Saene 2011-12-26

Intensive care is a rapidly changing area of medicine, and after four years from the 2nd edition the volume editors and authors have deemed necessary to update it. In the recent years, in fact, five new randomised controlled trials and five new meta-analyses demonstrate that selective decontamination of the digestive tract [SDD] is an antimicrobial prophylaxis to prevent severe infections of not only lower airways but also of blood. Additionally, SDD has been shown to reduce inflammation including multiple organ failure and mortality. An intriguing observation is the evidence that SDD using parenteral and enteral antimicrobials reduces rather than increases antimicrobial resistance. Moreover, a new chapter on microcirculation had been added. The volume will be an invaluable tool for all those requiring in depth knowledge in the ever expanding field of infection control.

Advanced Craniomaxillofacial Surgery - Michael Ehrenfeld 2020-09-18

Featuring more than 1,300 expertly drawn illustrations and images, the Advanced Craniomaxillofacial Surgery book is the comprehensive, highly anticipated follow-up to the original work on Principles of Internal Fixation of the Craniomaxillofacial Skeleton that was published in 2012. With detailed contributions from more than 80 renowned international authors, Advanced Craniomaxillofacial Surgery significantly builds on the solid foundation laid by the previous textbook. The new book comprises sophisticated techniques in skeletal and soft-tissue analysis for the disciplines of craniomaxillofacial, trauma, tumor, orthognathic surgery, as well as facial and esthetic surgery. The focused expertise of seven disciplines is synthesized together to offer comprehensive and unique interdisciplinary perspectives, necessary to create the "team" approach fundamental to achieving the progress required and expected in high-level medical centers: oral and maxillofacial surgery, plastic and reconstructive surgery, otolaryngology, neurosurgery, ophthalmology, oculoplastic surgery, and head and neck surgery. Nowhere else has there been such a thorough and comprehensive multispecialty approach

presented in the head and neck region. The advent of microvascular surgery, skeletal analysis, computerized surgical planning, personalized implant creation, and comprehensive radiographic analysis have given rise to new principles, techniques and possibilities, which are explored extensively in this new textbook. Advanced Craniomaxillofacial Surgery should be part of every surgeon's library.

Armstrong's Materialist Theory of Mind - Peter Anstey 2021-12-15

A Materialist Theory of Mind (1968) by David Armstrong is one of a handful of texts that began the physicalist revolution in the philosophy of mind. It is perhaps the most influential book in the field of the second half of the twentieth century. In this volume a distinguished international team of philosophers examine what we still owe to Armstrong's theory, and how to expand it, as well as looking back on how it came about. The first four chapters are historical in orientation, exploring how the book fits into the history of materialism in the twentieth century. The chapters that follow discuss perception, belief, the supposed explanatory gap between the physical and the mental, introspection, conation, causality, and functionalism.

Psychoeducation Manual for Bipolar Disorder - Francesc Colom 2006-10-05

Although the mainstay of bipolar therapy is drug treatment, psychoeducation is a technique that has proven to be very effective as an add-on to medication, helping to reduce the number of all types of bipolar recurrences and hospitalisation. The object is to improve patients' understanding of the disorder and therefore their adherence to pharmacotherapy. Based on the highly successful, evidence-based Barcelona program, this book is a pragmatic, therapists' guide for how to implement psychoeducation for bipolar patients. It gives practical guidance for how to conduct a psychoeducation group, using sessions and cases drawn from the Barcelona Psychoeducation Program. Moreover, it provides the reader with a great amount of practical tips and tricks and specific techniques to maximize the benefits of bipolar psychoeducation. The authors formed the first group to show the efficacy of psychoeducation as a maintenance treatment and have a long history of performing bipolar psychoeducation.

Magnetic Marketing for Dentists - Dan S Kennedy 2020-11-24

Diagnostic Nuclear Medicine and Radionuclide Therapy - Stefano Fanti 2016-05-20

Nuclear medicine is a medical imaging specialty involving the use of radioactive compounds for diagnostic and therapeutic purposes. As a medical branch, it is considered part of Diagnostic Imaging, but differs substantially from Radiology with respect to the source of the radiation made visible by the diagnostic devices. Nuclear medicine adopts also some types of radioactive emissions for therapeutic purposes, allowing the employment of the metabolic properties of the radiopharmaceuticals for the cure of certain clinical conditions and malignant diseases. Nuclear medicine is a relatively recent discipline and owes its origins to the discovery of natural radioactivity and the development of the first instruments for medical diagnostics. From the introduction of the first gamma camera of Anger, the technology has greatly improved. The evolution has led to the development of SPECT and PET technology and in the recent years to the introduction of hybrid tomographs allowing the combination in one session of both functional and morphological images.

The purpose of this textbook is to illustrate synthetically the principals of nuclear medicine diagnostics, with reference both to the technical part and main clinical indications. The booklet is addressed primarily to the degree courses for technologists, but can be reasonably used in other

courses and medical training programs where there is necessity for relatively simple, yet complete and clinically relevant concepts of nuclear medicine discipline. As a complement, the manuscript will end with a dedicated section summarizing some concepts of nuclear medicine therapy.
